Register a free business account Please try your search again later.The unit is able to work as 1, 2, or 4channel dimmer or relay pack. This pack can serve as a standalone chaser or a DMX dimmer pack. This pack is designed for zerocrossing circuitry, which protects against inductive loads. Each channel comes with two 3prong Edison sockets for USA. This unit features XLR female and male connection for DMX compatibility. Each channel is Equipped with a fuse.Features 3 pin XLR female and male connectors for DMX control One, two or four channel configuration option Dimming or switching setting of any channel in DMX or manual mode Digital display for easy setting and control Double output 110v grounded outlet per channel 16 built in preset programs Music mode with sound sensitivity knob Full manual control over each channel in DMX or manual mode Output 5A per channel, True 20Amp.Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. USGaming reviews 5.0 out of 5 stars However I do use it for DMX so those chases would mean nothing to me.<http://skibetjagtforening.damgruppen.dk/userfiles/comfort-star-manuals.xml>

- **4 channel dmx dimmer pack manual, soundlab 4 channel dmx dimmer pack manual, matrix dmx pro 4 channel double output dimmer pack manual, 4 channel dmx dimmer pack manual, 4 channel dmx dimmer pack manual download, 4 channel dmx dimmer pack manual pdf, 4 channel dmx dimmer pack manual free, 4 channel dmx dimmer pack manual instructions.**

Whereas channel 4 controls all channels independently this I found to be a little bit confusing at first because I figured if you have it on channel one it would be independent channels but thats not how it works check out the video that I posted for further review on this.This has four fuses that are for each light channel and also has a connector for rope lights. When you select the channel fixture on your DMX controller fader one through four will be your outlet control. There are no other special effects that I have found on this unit. In the user manual it literally goes between channel 4 which appears to continue but it is incorrect it starts off with DMX operation on page 4 on the bottom and then if you turn it over you would expect to see page 5 but they have the pages out of order page 5 is actually on the right side where Page 6 should go and Page 6 is on the left side page 5 and 6 tell you about the chase modes and how to program them dont get confused and thinking that the DMX mode you can also use the chase as well this may have been an oversight at the manufacturer but the information is all there you just have to pay attention to it. If you find this review helpful please give it a likeI couldnt find anyone in any of our local pro shops that had heard of this brand. So purchasing these units were a risk. So it was no surprise that the instructions for use with a software based light controller on a computer were not included. So you probably wont find Auto Settings for this brand for your DMX use either. It took us a while to figure out but we eventually got it to work with the settings for a Chauvet DMX Dimmer Pack with similar specks.After research, see that this is a common problem with DMX controllers and low voltage LED lights. Solved that problem by putting

a dummy incandescent load small desk lamp in the same circuit. Lamp comes up with DMX, but that isn't a problem for my application. If you know DMX it's easy to use. <http://parassteel.com/userfiles/comfort-star-ductless-manual.xml>

Running with DMX196 for studio mood lighting. Arrived faster than originally stated. This makes my 3rd one that I've purchased. I use them for stage lighting for a band. With dual 3prong Edison sockets per channel, allowing you to hook up two devices per channel. Also the DPDMX20L has 4 LEDs display for channel activity. Using the packs digital display, the pack is quick and easy to set up. There are dual Edison sockets supplied so more than one effect can be connected to each channel. There are 16 built in chase sequences, with speed and intensity control, available for your convenience. This device also has four external channel fuses which allows for quick and easy serviceability while out on the road. Another feature we included was the sleek reversible mounting panel on the rear to make it easier to install. Also for your safety we have a zero crossing circuitry for protection of the transformer loads when switching. Especially on professional events the breakdown of any part of the equipment cannot be accepted. This universal power pack has an automatic circuit breaker on every channel. News Markets About Us This compact unit features eight, 3prong Edison sockets 2 for each channel controlling up to 8 fixtures. The builtin hanging bracket is reversible to hang on truss or can be used with a clamp. This product has been thoroughly tested at our factory for quality and assurance. Your comments regarding our products and services are always welcome. Please be sure to read these instructions before operating this unit and keep them in a safe place for possible reference later. Each output channel contains dual 15 Amp Edison sockets that allow for two devices to be plugged into a single channel. Each channel can then be controlled via standard DMX 512 signal by adjusting a relevant channel fader on your DMX console. The dip switches on the face of the unit allow you to set the DMX patch address and operation mode for the pack.

Standard binary code should be used to set your DMX patch address. Dip Switch 10 is the "Mode" switch. The setting of this switch determines the packs' operation mode, either as a Dimmer or Switch pack. There are also 4 channel output LED's that allow you to view active channels. When the unit is set to Dim mode, these LED's dim in real time as the relevant channel is adjusted. A DMX signal indicator LED is also incorporated so that when DMX signal is present, the LED illuminates. Warning This unit must be earthed. Keep the unit dry, do not expose it to water or high levels of humidity. Do not allow for any flammable liquids to come in close contact with the unit. Technical repairs should be performed by an authorized technician. Do not operate this unit if the internal components are exposed. When replacing fuses, always replace with the same type and value. Mounting The DP415 was designed to be mounted on any form of pipe using an approved rigging clamp or onto any flat surface via hardware that is not included with the product. Note there should always be at least 12" of clearance between the pack and anything surrounding it. It is also recommended that you use a safety cable whenever mounting over head. To fasten a clamp to the unit, we recommend that you use either of the two supplied center holes. One is on the top side and the other is on the rear. Use the one that better suits your rig. Another means of hanging the unit, is by turning the rear panel around 180. You will need a phillips head screw driver to reverse the panel. Disconnect the units power cord, remove the four phillips head screws on the back of the unit, reverse the panel so the flanged side is facing out and replace the four phillips head screws. This will allow you to hang the pack onto any 2" pipe If you use this method to hang the unit, you must use a safety cable to ensure the unit does not fall down.

<http://www.drupalitalia.org/node/69307>

The final means of mounting this unit is onto a flat surface where you can secure at least two bolts. This means an exposed wood beam, metal beam, wall that you can determine has enough support to hold the units weight, etc. There are three holes on the back panel supplied for this form of

mounting. Use at least two of them, preferably, the two outside holes with at least 2" lag bolts.

Connections The DP415 is supplied with a 15 Amp, 12 gauge power line cord. Plug the line cord into a service capable of supplying up to 15 amps to the pack. Lamp loads should be plugged into the dual 15 Amp Edison sockets which are fitted on the sides of the pack and are clearly marked on the front panel. Each channel can accept a load of up to 5 Amps or 600 Watts. Be sure to not overload any channel as this may result in blown fuses and malfunction. Using a 3 pin XLR, DMX cable, connect out of your DMX console or previous fixture in line and into the DMX IN of the DP415. Connect out of the DP415, DMX OUT, and into the input of the next device in line. Set Dip Switches as required See Page 3 "Set DMX Address". It is recommended that the last pack or fixture in line include a DMX terminator into the Output. This will minimize data transmission errors. Each set of sockets is labeled with the relevant channel number.

2. Channel Output LED's 14 These LED's indicate relevant channel activity.
3. Power indicator LED This LED illuminates when the power switch is ON.
4. Dipswitches Dip switches 19 are used to set the starting DMX address channel and dip switch 10 is used to select the packs operation mode. When dip switch 10 is set to "ON", the pack functions as a Switch pack. Each dip switch incorporates a value that should be used when trying to figure out DMX address settings. The value for every dip switch doubles counting from left to right.

<http://harjac.com/images/canon-mp150-pixma-manual.pdf>

The goal is to try to get to the required DMX patch number by using the least number of dip switches and adding the binary values for each dip switch to land on the required address number. For Example These would be the dip switch settings for the specified DMX addresses. Any DMX value below 128 will switch the relevant channel OFF.

Page 3 Troubleshooting No Power to the pack Disconnect the power line cord. Reconnect the line cord to ensure proper connection. If the problem still persists, check the building service panel and make sure the service circuit breakers are ON.

No Channel Output Disconnect the power line cord. Check the corresponding channel fuse or fuses by removing the four phillips head screws on the rear panel to expose the circuit board and fuses. Always replace with same type and value. The DP415 incorporates four 6.3A 250V normal blow fuses. Replace rear panel and phillips head screws.

No DMX Control Check your dip switch settings. Ensure that the correct dip switches are set to the ON position. Check the DMX channel patch on your DMX console if available. Once you describe your problem to the customer service representative, he or she will determine whether it should be sent in or not. If it does need to be sent in, you will be issued a return authorization number that must accompany the package when sent in.

Maintenance and service operations are only to be carried out by authorized dealers.

7.1 Replacing the fuse

If the finewire fuse of the device fuses, only replace the fuse by a fuse of same type and rating. Before replacing the fuse, unplug mains lead.

Procedure

- Step 1 Open the fuseholder on the top panel with a fitting screwdriver.
- Step 2 Remove the old fuse from the fuseholder.
- Step 3 Install the new fuse in the fuseholder.
- Step 4 Replace the fuseholder in the housing.

Should you need any spare parts, please use genuine parts. If the power supply cable of this device becomes damaged, it has to be replaced by a special power supply cable available at your dealer. Unplug mains lead before opening the housing. For your own safety, please read this user manual carefully before you initially startup. Every person involved with the installation, operation and maintenance of this

device has to be qualified follow the instructions of this manual consider this manual to be part of the total product keep this manual for the entire service life of the product pass this manual on to every further owner or user of the product download the latest version of the user manual from the Internet

1. INTRODUCTION Thank you for having chosen a EUROLITE EDX4. You will see you acquired a powerful and versatile device. Unpack your EDX4. Before you initial startup, please make sure that there is no damage caused by transportation. Should there be any, consult your dealer and do not use the device.

2. SAFETY INSTRUCTIONS CAUTION. Be careful with your operations. With a dangerous voltage you can suffer a dangerous electric shock when touching the wires. This device has left our premises in absolutely perfect condition. In order to maintain this condition and to ensure a safe operation, it is absolutely necessary for the user to follow the safety instructions and warning notes written in this user manual.

Important Damages caused by the disregard of this user manual are not subject to warranty. The dealer will not accept liability for any resulting defects or problems.
